

Google Pop-Up Blocker

The Google Pop-Up Blocker is part of the Google Toolbar and will appear attached to the Internet Explorer browser as shown below.

When the pop-up blocking feature of the Google Toolbar is enabled the 911 BLOCKED button will appear on the Google Toolbar.

To configure the Google Pop-Blocker to allow pop-ups, simply click the 911 BLOCKED button when the pop-up error is displayed. This will allow pop-ups to occur during the current conference and all future conferences but unwanted pop-ups will remain blocked.

Once you have clicked the 911 BLOCKED button, the Conference Window should load. If the Conference Window does not automatically load, visit the log-in page and sign in again.
